

### The ART 3 position isolating switch offers:

- 3 position isolation required for closed, open and "to rail" "earthed"
- Vertical arrangement reduces miss alignment of blades when opened/closed
- Does not require flexible cables as current is drawn through the hinge (patent pending)
- Can be ganged for synchronised/interlocked operation
- Optional blade position indication available. Direct connection to the blade means reliable open/closed/to rail "earthed" indication.
- Secondary blade position indication available from motor drive option. Increases confidence and reliability of indication of open/closed/to rail "earthed"
