

Australian Rail Technology is the agent for the OMNIA range of overhead wiring solution. The OMNIA range of cantilever systems was computer designed to ensure a cost effective system. Comprehensive tests and an increasing number of certification from railway operators around the world confirm the high quality of this system and its design.

The OMNIA range offers:

- Simplicity
- Lightness
- Strength
- Flexibility of Application
- Simplified one man installation
- Reduction of Maintenance Cost

Cost savings

Comparisons of installation cost between traditional steel cantilevers and the OMNIA cantilever have proven cost savings. The use of light weight materials and the simplification of design mean installation requires less man power per cantilever and less time.

Simplicity

The OMNIA has the potential to simplify C-Calcs by removing the works-as executed phase of C-Calcs. No change in the parts BOM, just a change in the alignment of structure to achieve the required height and stagger.

- 650VDC
- 1500VDC
- 25kVAC
